How to find Reports and Maps - Your Guide to MP77

INTRODUCTION

For the convenience of the user, this supplement to Miscellaneous Paper 77 presents in one volume information on 239 maps and reports released or published by the Mines and Minerals Division in 1987. For general introductory remarks, the user is referred to Miscellaneous Paper 77, "Index to Published Reports and Maps, 1891 to 1977". The publications released during the periods 1978 to 1980 and 1981 to 1983, in 1984 and in 1985 are covered in the "1978-1980 Supplement", "1981-1983 Supplement", "1984 Supplement" and "1985 Supplement" respectively. These Supplements have been recompiled and aggregated into a single volume - "1978-1986 Supplement".

A description of the current report and map series follows.

REPORT SERIES

- ARIP - Aggregate Resources Inventory Paper Series reports on the nature and extent of aggregate resources within a specific area and are accompanied by black and white or coloured maps illustrating areas of high extraction potential for planning purposes.
- ASR - Annual Statistical Reports commenced in 1885 and have been published annually until 1978. In the last few years the reports have been published at less regular intervals.
- GB - Guidebooks, formerly Geological Guidebooks are interesting, informative and colourful Guides to the geology, physiography and scenery of specific areas of the Province.
- GDIF - Geological Data Inventory Folio Series gives a comprehensive summary of all exploration data for an area covered by the Folio and is accompanied by location maps showing property boundaries, mineral occurrences, drillholes, etc. Initiated in December 1982, it replaces the Data Series Maps.
- IMBP - Industrial Mineral Background Paper Series covers a variety of subjects related to industrial minerals and the background information needed by government agencies and aggregate industry companies in order to make economically viable decisions.
- MDC - Mineral Deposits Circular Series covers comprehensive inventory and geological characterization studies of specific types of mineral deposits, commodities, or resources, mainly on an Ontario-wide or regional basis.
- MP - Miscellaneous Paper Series may cover any geoscience subject. Reports are prepared for prompt public release and include annual publications such as Summary of Field Work, and The Resident Geologists' Report.
- MPBP - Mineral Policy Background Paper Series covers a variety of subjects each related to the background information needed by government agencies and companies to make in depth economic decisions on metallic mineral matters.
- NOEGTS - Northern Ontario Engineering Geology Terrain Studies Series reports include detailed descriptions of engineering geology and terrain studies of a specific area. Each report is accompanied by one or two coloured maps. The engineering geology of each terrain unit is discussed in detail.
- OFR - Open File Report Series is used to release as soon as feasible and without editing, recent information on most of the fieldwork and other research activities. Many of the open files are edited at a later date and subsequently published in one of the final report series.
- OGP - Oil and Gas Paper Series reports on the exploration, drilling and production of oil and gas in Ontario.
- OP - Occasional Paper Series reports discuss a wide variety of mineral-related subjects. The series includes subjects such as Financing of Junior Mining Companies, Evaluation of the Potential of Peat in Ontario, etc.
- PAPER - Papers-Oil and Gas Series reports on the exploration, drilling and production of oil and gas in Ontario. This series was discontinued after 1979 and has been replaced by OGP-Oil and Gas Paper Series.
- REPORT - Report Series describes the results of detailed geological surveys of specific areas and always includes one or more coloured maps.

- **SPECIAL VOLUME** – Special Volume Series is designed to publish comprehensive compilations on major topics of broad interest to the geoscience community. The first two volumes were released in 1984.
- **STUDY** – Study Series reports on new information or concepts of scientific merit not covered by other series publications. The content of this series varies but mainly covers larger areas than covered by the Report Series contents or discusses a specific subject.
- **VIDEO CENSUS** – Video Census Series is used to release annually a statistical computer analysis of the Mining Industry of Ontario including exploration and development work, and production.

MAP SERIES

- **MAP** – Coloured Geological Map Series includes detailed maps accompanying Reports and some Studies, and compilation maps at a scale of 1 inch equals 2 miles or smaller. The majority of Geo-physical-Geochemical maps are produced in the 80 000 Series Maps introduced in 1979. Prior to the 80 000 Series, these maps were released in the P. number Map Series.
- **P** – P. Number Series Maps include maps on a variety of geoscience subjects. Black and white Preliminary Maps in this series are frequently preceded by final color maps.

Full titles of the reports and maps are given in the publication index section of the supplement. In subsequent sections, Authors, Districts, NTS quadrangles and Townships are cross-referenced to relevant maps and reports by publication designator codes explained below:
